

The Different Types of Virtual Organizations

We going to get information about the how many different/various types of Virtual Organizations?

Virtual Organizations can be classified into the following four categories:

1. Permanent Virtual Organization.

Permanent Virtual Organization (PVO) is designed, from its inception, as a virtual organization to bring together market players and respond to opportunities for both improved revenue-generating activities as well as cost-savings.

2. Virtual Teams

Internal organizational use of the virtual concepts has generated virtual teams in a variety of organizations. The organizational use of the virtual concept in this instance is in virtual tasks and virtual teams.

3. Virtual Projects.

In virtual projects, organizations form alliances or coalitions to bring complementary organizations together to meet market opportunities. The alliance formed calls on manufacturers, developers, and markets from a variety of organizations to respond more effectively to market opportunities. In many cases, these are organizations based around similar industries or company types.

4. Temporary Virtual Organisations.

An extension of virtual project design is to establish a temporary virtual organization to take on multiple projects and develop responses to a particular market opportunity. These organizations represent a cooperative partnership of independent economic actors that join forces on a temporary basis to execute a common goal. They are usually very temporary and are based on complete equality in decision-making and leadership. These can be seen as a “temporary project-oriented portfolio of core competencies”.
